ABOUT ME

Final-year Electrical Engineering student at Universitas Islam Kediri (UNISKA Kediri) with a strong interest in Internet of Things (IoT), Artificial Intelligence (AI), and Machine Learning. Experienced in developing IoT-based monitoring and automation systems, web-based applications, and machine learning solutions through academic and research projects. Skilled in Python, web development, sensor integration, data analysis, and embedded systems. Eager to apply technical knowledge, analytical thinking, and problem-solving abilities to contribute to innovative technology projects while continuously expanding expertise in AI and smart systems.

EDUCATION

UNIVERSITAS ISLAM KADIRI, KEDIRI

2022 – 2026

Bachelor's of Engineering, Electrical Engineering

GPA 3.70 of 4.00

PROJECT & EXPERIENCE

**Web-Based Physical Activity Classification System Using Random Forest
(Undergraduate Thesis Project)**

Jul 2026

Designed and developed a web-based machine learning application for classifying physical activity levels using the Random Forest algorithm. The project involved dataset collection and preprocessing, feature engineering, model training, evaluation, and deployment within a Flask-based web platform. Users can input health-related parameters and receive activity level predictions in real time. The system utilizes Supabase for data management and applies various evaluation metrics, including accuracy, precision, recall, F1-score, and cross-validation, to assess model performance and reliability.

Smart Aquaculture Based on AIoT

Jan 2026

Smart Aquaculture is an AIoT-based monitoring and automation system designed to maintain optimal water quality in ornamental fish aquariums. The system collects environmental data such as temperature, pH, turbidity, and feeding conditions, then applies a Decision Tree machine learning model to predict water quality status and support automated device control. By combining IoT technology with machine learning, the system enables real-time monitoring, predictive analysis, and intelligent decision-making for aquarium management.

**Smart Irrigation and Fertigation System Based on IoT, Web
Monitoring, and Venturi Injection**

Sep 2024

This project is an IoT-based smart irrigation and fertigation system developed to automate watering and fertilizer distribution in agricultural environments. The system collects real-time field data through sensors and automatically controls irrigation and fertilizer injection using a Venturi system.

A web-based dashboard was developed to provide real-time monitoring, data visualization, and remote control capabilities. Through the dashboard, users can monitor environmental conditions, track irrigation activities, and manage the system remotely via the internet.

Grounding Installation Project at Fuel Station (SPBU)

Assisted in the installation of electrical grounding systems for a fuel station (SPBU) project, supporting both field and office operations. Responsibilities included collecting and documenting fieldwork data, assisting with project administration and technical reporting, and participating in electrical system implementation activities. Through this internship, gained practical experience in electrical engineering procedures, project documentation, and industrial safety practices.

Attendance Digital System

Nov 2024

Attendance Digital is an IoT-based attendance management system that utilizes RFID technology to automate attendance recording and monitoring processes. The system was designed to improve efficiency, reduce manual data entry, and provide real-time attendance tracking through a user-friendly interface. By integrating RFID hardware with a digital platform, the system enables users to record attendance quickly and accurately while providing administrators with easy access to attendance data and reports.

Student Press Organization Member (LPM)

Sep 2022 – Feb 2024

Served as a member of the Student Press Organization (LPM), contributing to the production and distribution of campus-related information and publications. Worked collaboratively with team members to support media activities, content development, and organizational initiatives. This experience strengthened communication, teamwork, adaptability, and organizational skills while fostering the ability to work effectively under deadlines and manage multiple responsibilities simultaneously.

CERTIFICATION & COURSES

- Google AI Essentials – Google
- Google AI – Google
- Getting Started with Data – IBM
- Elements of AI – MinnaLearn x University of Helsinki

TECHNICAL SKILLS

Language: Indonesian.

Areas of Interest: Artificial Intelligence, Machine Learning, Data Science, Data Analytics, and Technology-Driven Problem Solving.

Soft Skills: Analytical Thinking, Problem Solving, Continuous Learning, Team Collaboration, Adaptability, Fast Learning and Communication.

Technical Tools & Programming: Visual Code Studio, Microsoft Office, Arduino.IDE, Figma, AutoCAD, Python, HTML, CSS, Basic JavaScript, C++.
